## ResNET Static IP Request Form

Name: \_\_\_\_\_ Date: \_\_\_\_\_

Campus location: \_\_\_\_\_

E-mail address: \_\_\_\_\_ Campus Phone: \_\_\_\_\_

I am requesting a static IP address because I am unable to use DHCP and/or would like to run a personal web server.

Device Type: \_\_\_\_\_ Operating System Software: \_\_\_\_\_

Ethernet (MAC) Address: \_\_\_\_\_

To find your MAC address:

Win 95: From the Run... prompt, enter winipcfg

Win 98: From the Run... prompt, enter winipcfg

Win NT: From an MS-DOS prompt, enter ipconfig /all

Mac OS: From the Apple Menu, go to Control Panel to TCP/IP to File menu to Get Info

=====  
**ResNET is provided to students in the residence halls to support their academic work at Rensselaer. Since network capacity is shared by all and is a limited resource, there are some restrictions on how you may use ResNET. Your activities may not make excessive demands on network resources; if your activities have an inappropriate impact on others using the network, you may be asked to modify your activities significantly, or you may have your computer removed from the network.**

**You may operate a web server, if you so desire. In any event, all use of ResNET must comply with the campus policy on electronic citizenship. A summary of the policy appears in the Rensselaer Student Handbook. The complete text is available online at <http://www.rpi.edu/web/comec/>.**
