A total of 128 credit hours are required for graduation. Twenty eight of these are completely free electives. Students should select electives in consultation with the advisor to give a balanced program totaling 128 credit hours. Some H&SS courses can be deferred until the senior year to allow for earlier electives.

Students planning to pursue graduate studies in Chemistry are recommended to take at least 12 credits in Chemistry courses beyond those required. Research experience such as through CHEM-2950 or URP activities is particularly valuable.

---

1 ENGR-1600 may be substituted for CHEM-1200 by students transferring into Chemistry.

2 BIOL-2120 may be substituted for this course.

3 CHEM-4310 Bioorganic Mechanisms may be substituted for this course.
