## Contents

<b>1</b>	<b>Introduction</b> .....	1
	1.1 Statistical Mechanics and Vortex Problems .....	1
	1.2 Euler's Equation for Inviscid Fluid Flow .....	4
<b>2</b>	<b>Probability</b> .....	9
	2.1 Introduction .....	9
	2.2 Basic Notions .....	9
	2.3 Random Variables and Distribution Functions .....	10
	2.4 Expectation Values and Averages .....	12
	2.5 Variance .....	15
	2.6 Multiple Variables and Independence .....	17
	2.7 Limiting Theorems .....	19
	2.8 Bayesian Probability .....	25
	2.9 Remarks .....	26
<b>3</b>	<b>Statistical Mechanics</b> .....	29
	3.1 Introduction .....	29
	3.2 Ensembles .....	29
	3.3 Partition Functions .....	30
	3.4 Constraints and Chemical Potentials .....	32
	3.5 Partition Functions by Lagrange Multipliers .....	34
	3.6 Microstate and Macrostates .....	35
	3.7 Expectation Values .....	38
	3.8 Thermodynamics from $Z$ .....	39
	3.9 Fluctuations .....	42
	3.10 Applications .....	44
<b>4</b>	<b>The Monte Carlo Approach</b> .....	51
	4.1 Introduction .....	51
	4.2 Microstates and Macrostates .....	51
	4.3 Markov Chains .....	53

4.4	Detailed Balance .....	55
4.5	The Metropolis Rule .....	55
4.6	Multiple Canonical Constraints .....	57
4.7	Ensemble Averages .....	58
4.8	Random Number Generation .....	62
4.8.1	Linear Congruence Generators .....	62
4.8.2	Multiple Recursive and Fibonacci Generators .....	63
4.8.3	Add-with-Carry and Subtract-with-Carry Generators ..	63
4.8.4	Inverse Congruential Generators .....	64
4.8.5	Combined Generators .....	65
<b>5</b>	<b>Spectral Methods</b> .....	<b>67</b>
5.1	Introduction .....	67
5.2	Inner Products .....	67
5.3	Basis Functions .....	70
5.4	Minimizers .....	72
5.5	Fourier transforms .....	73
5.6	Spherical Harmonics .....	77
<b>6</b>	<b>Discrete Models in Fluids</b> .....	<b>79</b>
6.1	Introduction .....	79
6.2	Euler's Equations for Fluid Flows .....	80
6.3	N-body Hamiltonians .....	83
6.4	Symplectic Variables .....	86
6.5	Coordinates and Stereographic Projection .....	89
6.6	Dynamics on the Plane .....	91
6.7	Dynamics on the Sphere .....	103
6.8	Remarks .....	113
<b>7</b>	<b>Spin-Lattice Models</b> .....	<b>115</b>
7.1	Introduction .....	115
7.2	Spin-lattice Models .....	116
7.3	The Lattice Model .....	117
7.3.1	Point Strength .....	118
7.3.2	Normalized Strength .....	121
7.4	Negative Temperatures .....	124
7.5	Phase Transitions .....	125
7.6	Energy-Enstrophy-Circulation Model .....	127
7.7	Solution of the Spherical Ising Model for $T = 0$ .....	128
<b>8</b>	<b>Monte Carlo Simulations</b> .....	<b>133</b>
8.1	Introduction .....	133
8.2	Correlation Functions .....	137
8.3	The Mean Nearest Neighbor Parity .....	140
8.4	Distances .....	157

8.5	Remarks	159
<b>9</b>	<b>Polyhedra and Ground States</b>	<b>161</b>
9.1	Introduction	161
9.2	Face-Splitting Operations	162
9.2.1	Centroid Splitting	163
9.2.2	Geodesic Splitting	164
9.2.3	Noncommutivity	165
9.3	Polyhedral Families	168
9.4	Polyhedral Families Versus Vortex Gas	169
9.4.1	Pairwise Interaction Energies	170
9.5	Energy of Split Faces	173
9.5.1	Tetrahedron Splittings	174
9.5.2	130 Vortices	176
9.5.3	Octahedron Splittings	178
9.5.4	258 Vortices	180
9.5.5	Icosahedron Splittings	182
9.5.6	642 Vortices	184
<b>10</b>	<b>Mesh Generation</b>	<b>187</b>
10.1	Introduction	187
10.2	The Vortex Gas on the Sphere	188
10.3	Radial Distribution Function	190
10.4	Vortex Gas Results	192
10.5	Rigid Bodies	206
10.6	Spherical Codes	209
<b>11</b>	<b>Statistical Mechanics for a Vortex Gas</b>	<b>213</b>
11.1	Introduction	213
11.2	The Vortex Gas on the Plane	214
11.2.1	Trapped Slender Vortex Filaments	219
11.3	The Discretized Model	222
11.4	Extremizing E	224
11.5	Variational Problem on the Radius	226
<b>12</b>	<b>Two-Layer Quasi-Geostrophic Models</b>	<b>233</b>
12.1	Introduction	233
12.2	Two-Layer Quasi-Geostrophic Models	233
12.3	Governing Equations	234
12.4	Numerical Models	240
12.5	Numerical Vortex Statistics	241

<b>13 A Coupled Barotropic Flow - Rotating Solid Sphere System</b>	245
13.1 Introduction	245
13.2 The Coupled Barotropic Vorticity – Rotating Sphere System	246
13.2.1 Physical Quantities of the Coupled Flow – Rotating Sphere Model	247
13.3 Variational Results	249
13.4 Energy-Enstrophy Theory for Barotropic Flows	250
13.4.1 Non-Rotating Extremals	251
13.4.2 Rotating Sphere	253
13.5 Statistical Mechanics	254
13.5.1 Derivation of Spin-Lattice Hamiltonians	254
13.5.2 Gaussian Energy-Enstrophy Model	255
13.6 Spherical Model	256
13.7 Monte Carlo Simulations of the Spherical Model	257
13.8 The Vector Spherical Model for Barotropic Statistics	257
13.9 Remarks	260
<b>References</b>	263
