Underrepresented Minority Scholarships

Many corporations are interested in diversifying their workforce to mirror the demographics of the national workforce. To assist students who may be underrepresented in particular fields of engineering, corporations offer scholarships in an effort to increase the number of ethnic and racial minorities whose academic and professional interests align with the company and who meet the scholarship's eligibility criteria.

Scholarships are awarded for one-year at a time. It’s possible to receive the same scholarship in future years provided that the student continues to meet the eligibility criteria. Students may not simultaneously receive scholarships from two different companies.
